

## Light Curing Putty Information

**The Light Curing Putty product from Phrozen is a gel-like material that cures rapidly under UV light exposure. The product is created to resotre broken parts to their original shape, to fill gaps and holes in models. Light Curing Putty is easy to use but it is important to do not forget about the safety rules. Please take a look at the precautions below.**

### Precautions

- 1) Avoid direct exposure to sunlight.
- 2) Please wear gloves when handling the product.
- 3) For thicknesses between 1 mm–8 mm, cures with UV light for 15 secs–3 mins. Curing time varies depending on the thickness.
- 4) Avoid direct contact with the skin to prevent allergies.
- 5) In case of eye contact, rinse thoroughly and seek medical attention immediately.
- 6) After a long exposure time, the putty may have a higher temperature. Please handle this with caution.
- 7) Keep away from children.
